

CLA City — Feature Roadmap for Codex

Source of inspiration: jesuschurchfl.com (pastor-approved reference). Rebuild lives in this repo's **en/** and **ru/** pages + **assets/css/styles.css**. All new UI must use existing CLA OS tokens (`--color-primary`, `--color-navy`, `--color-gold`, `--shadow-default/hover`, `--radius-small/medium/large`) — no new hardcoded hex values.

1. Pastor welcome note (homepage)

Add a short first-person welcome quote from Leonid & Marina Malko next to their photos in the "Pastoral Leadership" section — 2-3 sentences, warm and personal, signed by name.

en/index.html, ru/index.html — Pastoral Leadership section

2. Scripture line in hero

Insert one short Bible verse (e.g. John 3:16 or a CLA-relevant verse) directly under the hero H1, above the CTA buttons. Small italic style, muted color token.

en/index.html, ru/index.html — Hero section / components/Hero

3. "What to Expect / Who Is It For" per service

Convert the Sunday Service block into two short expandable (or side-by-side) panels answering what happens and who it's for — mirrors the Slavic/English split pattern used at Jesus Church.

en/index.html — Sunday Visit section

4. Prominent "Watch Live" CTA

Add a distinct, high-contrast "Watch Live" button linking to the YouTube live/streams tab, separate from the existing archive-style "Hear before you visit" block.

en/index.html — near YouTube section

5. Dedicated "New Here?" page

New page answering first-timer questions (parking, what to wear, kids drop-off, service length) — distinct from [visit.html](#), which stays logistics-only (address, map, time).

en/new-here.html, ru/new-here.html (new) + nav link

6. Volunteer / Serve CTA

Give volunteering its own top-level card/section (homepage or [ministries.html](#)), not buried inside a single ministry description.

en/ministries.html or homepage — new section

7. Lightweight Bible blog

3 short devotional posts to start (static HTML is fine). Improves SEO and gives repeat visitors a reason to return between Sundays.

en/blog/ (new folder) + nav link

8. Real online giving integration

Replace the mailto-based Give flow with an actual giving platform (Pushpay, Tithe.ly, or Planning Center) embed or link — flag as a vendor decision, not just a design change.

en/give.html, ru/give.html

Execution rule: one item at a time. Implement, verify against CLA OS tokens (no hardcoded hex/px shadows/radii), confirm responsive + accessibility (focus states, reduced-motion) unaffected, then move to the next item.
