

CLA Brand & Design Language OS v1

Section 13 – Seasonal & Event Design

STATUS: APPROVED

Seasonal Design Philosophy

- The CLA identity remains constant throughout the year.
- Seasonal events enhance the website—they never replace its identity.
- The website should always be immediately recognizable as CLA.

Seasonal Layering

- Temporary seasonal elements are layered onto the existing CLA Design Language.
- Seasonal updates may include photography, accent colors, background treatments, decorative graphics, and event-specific content.
- Typography, navigation, components, radius, shadows, spacing, motion, and overall craftsmanship remain unchanged.

Seasonal Colors

- Seasonal colors are carefully selected accents within the official CLA Color System.
- Royal Blue remains the primary CLA brand color.
- Seasonal palettes complement the brand rather than replace it.

Seasonal Decorations

- Decorations are minimal, elegant, and intentional.
- They support the atmosphere without distracting from the message.
- Seasonal decoration must never overpower photography, typography, or content.
- The focus always remains on Christ, the church, and the message.

Event Promotion Strategy

- The homepage Hero remains part of the official CLA Hero System.
- Temporary featured event sections appear directly beneath the Hero.
- Supports Christmas, Easter, Women's Night, Kids Camp, MTC Conference, Guest Speakers, Baptisms, Worship Nights, Youth Events, Community Outreach, and future ministry events.

Multiple Featured Events

- Multiple featured events may appear simultaneously when appropriate.
- Events should be prioritized by relevance and timing.
- Featured sections should complement one another rather than compete.
- The homepage should remain clean, balanced, and easy to scan.

Event Lifecycle

- Events should expire automatically whenever possible.
- Every event should support a start date, end date, and visibility schedule.
- Administrators may extend, end early, hide, restore, or override automation.

- The long-term goal is a fully automated event management system.

Past Events

- Past events are removed from the public website after they end.
- The public website focuses on current and upcoming ministry life.
- Historical records may be stored internally rather than displayed publicly.

Event Landing Pages

- Major events should have dedicated landing pages whenever appropriate.
- Smaller events may be promoted on the homepage, ministry pages, event listings, or announcement sections.
- The website owner determines the appropriate level of promotion.

Event Registration

- The long-term standard is integrated registration directly within the CLA website.
- Visitors should register, submit forms, receive confirmations, complete sign-ups, and manage registrations without leaving the website whenever possible.

Countdown Timers

- Major events may include elegant countdown timers.
- Reserved for high-impact events.
- Countdown timers should create anticipation without distracting from content.

Illustrations & Graphics

- Seasonal and event-specific pages may use custom illustrations and graphics.
- Photography remains the primary visual language.
- Illustrations should remain elegant, premium, and purposeful.
- Cartoon-like illustrations are reserved for intentionally designed children's experiences.

Seasonal Automation

- Seasonal features should activate and deactivate automatically whenever possible.
- The website should automatically manage seasonal sections, countdowns, and event visibility.
- Administrators always retain manual override control.
