

Section 12 — Future Expansion & Governance

STATUS: APPROVED

Purpose

This section defines how the CLA website should continue evolving while preserving its identity, quality, and long-term vision.

The goal is to ensure that future growth remains intentional rather than reactive.

Governance Philosophy

The CLA website is governed by its approved Operating Systems.

These documents provide the standards for:

- * Design
- * Architecture
- * Development
- * Content
- * Accessibility
- * Performance
- * Quality

Future decisions should strengthen these standards rather than replace them without approval.

Project Ownership

The Project Owner has final authority over:

- * Design decisions
- * Technical decisions
- * Architecture
- * Content
- * Features
- * Priorities
- * Releases
- * Future direction

Recommendations from contributors are encouraged, but final approval belongs to the Project Owner.

Operating System Evolution

Each CLA Operating System is considered a living document.

Approved sections remain stable until intentionally revised.

Changes should be:

- * Documented
 - * Reviewed
 - * Approved
 - * Incorporated into the official documentation
-

Six-Month Review

Every six months, the Project Owner should review:

- * Brand & Design Language
- * Website Architecture
- * Component Library
- * Content standards
- * Performance
- * Accessibility
- * Security
- * Development workflow
- * New technologies
- * Opportunities for improvement

The objective is continuous improvement without unnecessary redesign.

Backward Compatibility

Whenever practical, improvements should preserve compatibility with existing components and pages.

Major breaking changes should occur only when they provide significant long-term value.

Documentation

All major architectural decisions should be documented.

Documentation should remain:

- * Accurate
- * Current
- * Concise
- * Easy to understand

Future contributors should understand not only what exists, but why it exists.

Long-Term Sustainability

The website should remain maintainable for many years.

Future growth should emphasize:

- * Simplicity
- * Reusability
- * Scalability
- * Reliability
- * Consistency

Complexity should only be introduced when it provides meaningful benefit.

Innovation

Innovation is encouraged when it:

- * Improves visitor experience
- * Strengthens ministry
- * Improves maintainability
- * Enhances accessibility
- * Improves performance

Innovation should never compromise the core CLA identity.

Success Criteria

The project is successful when:

- * Visitors enjoy a seamless experience.
 - * Ministry content is easy to maintain.
 - * Contributors understand the architecture.
 - * Development remains efficient.
 - * Future improvements are straightforward.
 - * The website continues serving the church with excellence.
-

Final Guiding Principle

Build for today's ministry while creating a foundation that faithfully serves future generations.
