

STATUS: APPROVED

Purpose

This section defines how content is organized, stored, managed, translated, and maintained throughout the CLA website.

The goal is to separate content from presentation while keeping the website easy to update and expand.

Content Separation

Website content should remain separate from HTML whenever practical.

Presentation, styling, behavior, and content should each have clearly defined responsibilities.

This improves maintainability, translations, and future scalability.

Content Organization

Each page should maintain its own dedicated content source.

Examples include:

- * Home
- * About
- * Visit
- * Ministries
- * Events
- * Give
- * Contact

Keeping content separated by page improves organization and reduces unnecessary complexity.

Translation System

English and Russian content should remain synchronized.

Each language should have its own content while preserving:

- * Structure
- * Hierarchy
- * Navigation
- * User experience

Translations should communicate meaning naturally rather than relying on literal word-for-word translation.

Reusable Content

Shared content should be written once and reused whenever practical.

Examples include:

- * Church address
- * Service times
- * Contact information
- * Footer content
- * Navigation labels
- * Common calls to action

Duplicated content should be avoided whenever possible.

Dynamic Content

Content should support future expansion, including:

- * Events
- * Announcements
- * Ministries
- * Sermons
- * Testimonies
- * Staff
- * Media
- * Seasonal content

The architecture should allow new content types without restructuring the website.

Media References

Images, videos, and downloadable resources should be referenced rather than embedded directly into content whenever practical.

This improves maintenance and asset management.

SEO Content

Every page should support dedicated SEO content including:

- * Title
- * Meta description
- * Open Graph information
- * Structured metadata
- * Social sharing information

SEO content should remain independent from visual page content whenever practical.

Content Ownership

Content should always have one clear source of truth.

Conflicting or duplicated versions of the same content should be avoided.

Approved content should only be updated intentionally by the Project Owner or authorized contributors.

Future CMS Support

The content architecture should remain compatible with future CMS integration without requiring a complete website rebuild.

The current architecture should allow gradual evolution while preserving the existing website.

Guiding Principle

Content should be easy to manage, easy to translate, and easy to grow without affecting the design system.
