

STATUS: APPROVED

Purpose

This section defines how images, videos, icons, documents, fonts, and other digital assets are organized, named, optimized, and maintained throughout the CLA website.

The goal is to keep all assets organized, reusable, and easy to manage as the website grows.

Asset Organization

Assets should remain organized in a clear and predictable folder structure.

Examples include:

- * Images
- * Videos
- * Icons
- * Logos
- * Documents
- * Fonts
- * Downloads

The existing folder structure should remain the standard unless a clear improvement is approved.

Naming Convention

Asset names use camelCase.

Examples:

- * heroWorship.webp
- * kidsCamp2026.jpg
- * pastorPortrait.webp
- * welcomeVideo.mp4

Names should be descriptive and easy to understand.

Image Optimization

Every image should be optimized before publication.

Images should balance:

- * Visual quality
- * Loading speed
- * Responsive performance

Oversized or unoptimized images should not be published.

Modern Formats

Modern image formats should be preferred whenever practical.

Examples:

- * WebP
- * SVG (icons and graphics)
- * PNG (when transparency is required)
- * JPG (when appropriate)

The chosen format should best suit the asset.

Responsive Images

Images should support responsive loading.

Visitors should not download unnecessarily large images on smaller devices.

Responsive image techniques should be used whenever practical.

Video Management

Videos should be optimized for web delivery.

Large video files should not reduce page performance.

Streaming or external hosting may be used when appropriate.

Icons

Icons should remain consistent with the CLA Design Language.

Icons should be:

- * Minimal
- * Professional
- * Timeless
- * Consistent

Emojis should not replace interface icons.

Downloads

Downloadable resources should remain organized.

Examples include:

- * PDFs
- * Study Guides
- * Event Resources
- * Registration Forms
- * Church Documents

Downloads should use descriptive filenames and remain easy to locate.

Asset Reuse

Assets should be reused whenever practical.

Duplicate copies of identical assets should be avoided.

One approved asset should serve as the official source whenever possible.

Future Growth

The asset structure should allow the website to expand without requiring major reorganization.

New ministries, events, and media should fit naturally into the existing system.

Guiding Principle

Every asset should be easy to find, easy to maintain, optimized for performance, and consistent with the CLA Design Language.
